

KASHMIRA PATIL

Software Engineer | Backend Systems & Applied AI

Pune, Maharashtra | kashmiraspatil@gmail.com | +919156374783

[Technical Portfolio](#) | [GitHub Profile](#) | [Kaggle Profile](#) | [LinkedIn Profile](#) | [Medium Blog](#)

EDUCATION

B.Tech Computer Science — AI & Data Science | MIT World Peace University, Pune | *Expected 2027* | CGPA: 8.68 / 10

Relevant Coursework: DSA, DBMS, Operating Systems, Computer Networks, Software Engineering, Big Data, Statistics, Data Science with R Programming

TECHNICAL SKILLS

Languages: Python, Java, SQL

Backend & Software Engineering: FastAPI, Spring Boot, REST APIs, Object-Oriented Programming, Data Structures & Algorithms

AI & Data: PyTorch, TensorFlow, Scikit-Learn, Pandas, NumPy, NetworkX

Cloud & Tools: Google Cloud Platform (GCP), Docker, Git, Postman

EXPERIENCE

CIS Service Delivery Management – Incident Management Intern | Zensar Technologies *Jul 2026 – Present*

- Conducted end-to-end customer profiling across business operations, market positioning, technology landscape, infrastructure, stakeholders, and business requirements, delivering a detailed assessment report and dashboard analysing market dynamics since 2019.
- Independently configured Microsoft Intune-based enterprise device onboarding and M365 access, integrating MS Authenticator and reconfiguring Outlook, Teams and Edge to comply with organisational device-management Policies.

SDE Intern — Kash Precisions (Precision Engineering & Manufacturing) *Jun – Jul 2025*

- Designed and developed an end-to-end financial operations application using FastAPI and MySQL, simplifying routine accounting workflows into an Excel-style debtor-creditor ledger accessible to non-accounting staff.
- Designed the database schema and REST APIs for transaction management and configurable cheque printing across 5-6 major bank layouts, reducing processing effort by an estimated 80% based on internal assessment.

PROJECTS

ZeroTrace — End-to-End Encrypted Messaging & Threat Detection System *Mar 2026*

Java | Spring Boot | REST APIs | RSA-2048 | AES-256 | SHA-256

- Engineered an end-to-end encrypted client-server messaging system using per-message AES-256 keys, RSA-2048 key protection, and client-side key management, achieving sub-2ms encryption/decryption latency.
- Developed metadata-based threat detection for mass-spread and abnormal-payload behaviour using Random Forest models, analysing traffic patterns without accessing plaintext message content.
- Built a 14-API Spring Boot backend for authentication, public-key distribution, encrypted message relay, and delivery-triggered TTL enforcement with server-side expiry and deletion.

BoardSight — Multimodal Meeting Intelligence & Workflow Automation Platform *Feb 2026*

FastAPI | Google Cloud Run | NLP | Computer Vision | Workflow Automation

- Engineered a multimodal meeting-intelligence pipeline combining timestamped transcription, speaker analysis, visual evidence extraction, and AI-Assisted decision/action detection, achieving 19.13s median internal processing time on 60-second recordings across 5 benchmark runs.
- Built a human-in-the-loop workflow engine that converts evidence-linked decisions into prioritised tasks, with review and approval – gated execution across 4 external integrations: GitLab, Notion, Trello, and Microsoft To Do.
- Deployed on Google Cloud Run**, with workspace-scoped access and usage controls, supporting 7 verified report formats and 99/99 passing backend tests.

QForce — Graph & Physics-Inspired Market Analytics Framework *Oct 2025*

Python | FastAPI | scikit-learn | NetworkX | Statistical Modelling

- Engineered a leakage-safe experimental ML pipeline across 166K+ asset-date observations from 20 ETFs and 15 ECB currency series, with temporal holdouts and external replication.
- Developed physics-inspired and cross-asset graph features for five-day ETF ranking, achieving 54.82% accuracy across 560 predictions and 28 non-overlapping decision dates on an approximately 50% chance-balanced task.

- Evaluated model improvements using bootstrap confidence intervals, statistical significance, portfolio-risk metrics, and 44 automated tests, finding that observed gains over traditional baselines were not statistically conclusive.

LEADERSHIP

Strategic & Content Head | Executive Committee – Career Development Centre (CDC- MIT WPU Student Body) | Sep 2024 – May 2026

- Led planning and execution of university-wide initiatives including the NISAU Achiever's Dialogue (900+ student footfall), while co-developing CDC's annual proposal and budget and leading a 20+ member content team.
- Entrusted by university administration to lead 5-week AMCAT execution for 5000+ students, coordinating ground operations, stakeholder communication, and task delegation across a student team.

Captain – MIT WPU Women's Lawn Tennis Team | Aug 2025 – Aug 2026

- Represented MIT-WPU at the AIU West zone Inter-University Tournament and captained the team to victory in a Davis Cup-format inter-university competition at FLAME University.

ACHIEVEMENTS

- **National Winner – Smart India Hackathon 2025** | Developed an ML-based live marine microorganism counting system for real-time sampling
- **Winner – HackMIT-WPU 2025** | Ranked winner among 350+ competing teams
- **MIT-WPU Student Achiever Award – 2025, 2026** | Recognised in consecutive years for excellence across academic, technical, and extracurricular achievement.
- **Winner – CACC Coders' Arena** | QForce ranked 1st in the Data Design Track in a jury-evaluated project competition.
- **State-level Lawn Tennis Champion – Women's Open**
